Professional Summary

Full Stack Software Engineer with more than four years of experience designing and developing frontend solutions for enterprise applications serving customers across Colombia and Mexico.

Experienced in JavaScript, React, Ember.js and REST API integration, with a strong background in building user interfaces, business workflows, reusable components and maintainable web applications.

Passionate about creating intuitive user experiences, improving frontend architecture and delivering high-quality software through clean design and continuous refactoring.

Professional Experience

Autolab

Full Stack Software Engineer

October 2021 – May 2026

Bogotá, Colombia

Fleet Management Portal

- Designed and developed user interfaces for the Fleet Management Portal, enabling enterprise customers to manage maintenance operations, quotations, appointments, and fleet administration through intuitive business workflows.
- Architected a modular frontend application with reusable components, role-based interfaces, dashboards, and scalable features while integrating seamlessly with backend services.

CRM Platform

- Modernized legacy frontend modules by introducing reusable components, improving maintainability, and reducing technical debt across the CRM platform.
- Developed business features for warranties, quotations, workshop administration, and operational management with a strong focus on usability and workflow efficiency.
- Integrated frontend applications with REST APIs and automated WhatsApp communication features to improve operational processes and user experience.

Backend Services

- Designed and implemented REST APIs and business logic supporting both the CRM Platform and Fleet Management Portal.
- Developed reusable SQLAlchemy query builders, optimized PostgreSQL queries, and centralized shared backend components to improve maintainability and performance.

Production Support

- Investigated and resolved production issues affecting frontend applications by analyzing user reports, Sentry logs, and backend integrations.
- Collaborated with cross-functional teams to diagnose and fix issues across frontend, backend, and database layers.
