Professional Summary

Software Engineer with more than four years of experience developing backend applications in Python for enterprise software serving customers across Colombia and Mexico.

Experienced in Python, Flask, SQLAlchemy, PostgreSQL and REST API development, with a strong background in business process automation, database optimization and scalable backend architecture.

Passionate about writing clean, maintainable Python code, solving complex technical problems and continuously improving software quality through refactoring and reusable software design.

Professional Experience

Autolab

Full Stack Software Engineer

October 2021 – May 2026

Bogotá, Colombia

Fleet Management Portal

- Designed and developed the Fleet Management Portal, delivering frontend and backend features that automated fleet maintenance workflows, quotation approvals, appointment tracking and operational communication for enterprise customers.
- Architected modular frontend and backend components with role-based access control, dashboards and scalable business modules, improving maintainability and enabling future service separation.

CRM Platform

- Modernized legacy CRM modules through reusable frontend components, backend refactoring and centralized business logic, improving maintainability and reducing technical debt.
- Designed and implemented business features for warranties, quotations, workshop administration and operational management across frontend and backend layers.
- Automated operational workflows by integrating WhatsApp notifications and reducing manual communication between advisors, workshops and fleet customers.

Backend Services

- Designed and developed Python backend services using Flask, implementing business logic and REST APIs supporting both the CRM Platform and Fleet Management Portal.
- Designed PostgreSQL data models, developed reusable SQLAlchemy query builders, optimized complex SQL queries and centralized shared backend components to improve performance and maintainability.

Production Support

- Provided production support by investigating incidents reported through Sentry and business teams across frontend, backend and database layers.
- Diagnosed and resolved production issues while collaborating with cross-functional teams to maintain software reliability and operational continuity.

Technical Skills

Python	Backend	Databases	Programming	Tools
Python Flask SQLAlchemy	REST APIs JWT/Auth Business Logic	PostgreSQL Redis Database Design	SQL JavaScript Git	Docker Linux Sentry

Education

Universidad Nacional de Colombia

B.Sc. in Systems and Computer Engineering

Certifications

Universidad Nacional de Colombia

Diploma Program in Cloud-Based Software Architecture and Quality

Bogotá, Colombia

January 2026 – June 2026
